Business Sales Performance Analytics

Future Interns – Data Science & Analytics Internship

Task 1

1. Introduction

This project analyzes sales data to understand business performance using data analysis and visualization techniques. The analysis focuses on sales, profit, orders, customers, products, categories, regions, and monthly trends.

2. Project Objective

The main objectives of this project are:

- Analyze overall sales and profit performance.
- Identify high-performing categories and products.
- Compare sales performance across regions.
- Understand monthly sales trends.
- Examine the relationship between discounts and profit.
- Create an interactive dashboard for business decision-making.

3. Dataset Description

The project uses the Superstore Sales dataset, containing information about orders, customers, products, categories, regions, sales, profit, quantity, discounts, and dates.

The dataset contains 9,994 rows and 21 columns.

4. Data Cleaning

The following data-preparation steps were performed:

- Checked for duplicate records.
- Checked for missing values.
- Converted Order Date and Ship Date into proper date formats.
- Prepared the data for analysis and visualization.

The duplicate check found 0 duplicate records.

5. Data Analysis

The analysis examined:

- Sales and profit by category
- Sales and profit by region
- Top 10 products by sales
- Monthly sales trends
- Discount and profit relationship
- Overall sales, profit, orders, and customers

6. Business Insights

Write the findings from your analysis here.

- Sales and profit vary across different product categories.
- Regional performance differs across the business.
- A small group of products contributes significantly to overall sales.
- Monthly sales trends show periods of higher and lower sales.
- Discount levels can have an impact on profitability.
- High sales do not always result in high profit.
- Important: If your actual analysis shows a different result for any of these points, replace it with your actual finding.

7. Business Recommendations

1. Focus on categories that generate strong sales and profit.

2. Develop region-specific strategies for lower-performing regions.

3. Maintain sufficient inventory for top-performing products.

4. Optimize discount policies to protect profit margins.

5. Use monthly sales trends to plan inventory and marketing campaigns.

6. Monitor both sales and profit when making business decisions.

8. Power BI Dashboard

Insert a screenshot of your completed Power BI dashboard here.

Under the screenshot, write:

The Power BI dashboard provides a visual overview of sales performance using KPI cards, monthly sales trends, category performance, regional sales, and top-performing products.

9. Conclusion

The analysis provides a clear view of sales, profit, product, category, regional, and monthly performance. The Power BI dashboard makes these results easier to understand and can support better inventory, marketing, pricing, and profitability decisions.
